AI Systems Builder | Shopify Growth and Creative Operations

SUMMARY

I build AI systems that take repeat work off small teams' plates, and I help Shopify brands grow with SEO, product photos, Pinterest and steady store upkeep. I've built 50+ Claude skills and scheduled tasks for a content strategy team, plus store systems that save about 190 work hours a week on a 15,000+ product catalog. I come from 10+ years of design and content, so the work my systems turn out still looks good and reads like a person made it.

Media Scaling | Remote

- Built 50+ Claude skills and scheduled tasks that ran the strategy lead workflow, from script writing and QC to video review notes, account audits and weekly reports. Shared 35 of them as skill files the whole strategy team used.
- Automated a daily deadline check across every client's posting schedule that logged a pass or fail for each editor and social media manager in a shared tracker and drafted Slack reminders for late work.
- Connected Claude to Notion, Slack, Google Drive, Metricool, SocialPruf and Fathom, with one shared Notion client roster as the source every automation read from.
- Built a Claude workflow that creates a compliance-aware scriptwriting skill for each client from their own docs, analytics and past winners, so new accounts launched with a consistent script system.
- Automated weekly performance reports, views guarantee tracking and QC scorecards for editors, writers and social media managers.
